

## Tamper-Resistant

The Hex-Pin™ is an age-old, tamper-resistant screw common in jails and the retail industry for the past 60 years.

SECURITY LEVEL: 3

This screw is useful at deterring opportunistic vandalism such as within bathroom stalls. Because bits are readily available at most hardware stores the Hex-Pin™ is not recommended for securing items of value. Stories abound of Hex-Pin™ bits sold in retail stores being used to compromise something of value in the same store.
